

MUHAMMAD AYAAN SHAIKH

Full-Stack Software Developer

Full-stack developer with 2+ years of experience building responsive UIs with React.js and developing scalable RESTful APIs using Node.js and Express.js, following MVC architecture.

WORK EXPERIENCE

Prosoft E-solutions India Pvt Ltd

May 2024 - Present

Software Developer

Karnataka, India

- Built a Node.js + WhatsApp Cloud API chatbot handling 10K+ messages/month, integrating SDR and ASN lookups for enhanced functionality.
- Integrated a secure web admin panel with role-based access control for bot configuration and management.
- Migrated a legacy application to React.js + Node.js with multilingual support, improving overall UX by 60%.
- Implemented drag-and-drop functionality using React.js native drag events for a manual column mapping module.
- Increased file import performance by 40% through parallel processing, optimized uploads with express-fileupload, and state management via Tanstack React Query.
- Built a scalable data import system supporting TXT, CSV, and Excel formats.
- Reduced load and processing time by 70% by caching large datasets in Tanstack React Query, improving performance and responsiveness for end users.

CodeArray Technologies Pvt Ltd

Jun 2023 - May 2024

Associate Software Engineer

Mumbai, India

- Implemented a role-based authentication system using React.js and Redux Toolkit, ensuring secure and personalized user access.
- Designed an appointment scheduling workflow with configurable physician availability, streamlining booking efficiency by 35%.
- Developed fully responsive, paginated tables to improve data navigation and user experience across devices.
- Created a custom theme colour selection feature for login screens, enhancing personalization and branding.
- Enhanced order processing in EZ Order by 70% using advanced Redux Toolkit techniques.
- Optimized order processing workflows by leveraging advanced Redux Toolkit patterns, improving state management and performance.

PROJECTS

Career Compass [Link](#)

- Working on a real-time full-stack job tracking web application enabling users to manage and organize their job applications from multiple platforms efficiently.
- Implemented secure user authentication and authorization using JWT with Axios interceptors, ensuring safe access control across user sessions.
- Built the backend using Node.js and Express.js, with PostgreSQL for structured data storage and complex queries.
- Integrated Material UI for a modern and responsive frontend UI, enhancing user experience across devices.
- Deployed the application on Render for both backend, frontend and PostgreSQL database, ensuring seamless CI/CD and serverless deployment.
- GitHub repository and live demo available for showcasing code quality, design system, and deployment pipeline.
